

List of the hymenopteran genera and species recorded in Turkey based upon the Info-system of the Cesa

(Report of the temporary results of the Entomofauna of Turkey- 8)

Ahmet Ömer Koçak Muhabbet Kemal

Abstract: List of the hymenopteran genera and species recorded in Turkey based upon the Info-system of the Cesa. *Cesa News* 52: 1-63, 14 figs.

In this 8th report of the Project Entomofauna of Turkey, totally 1537 species and 449 genera recorded in Turkey are listed, with their synonyms. Besides, provincial codes, if known, are added to the species. A selected bibliography is also given.

Key words: List, fauna, Turkey, *Hymenoptera*

As in the case of other projects of the Cesa, the Entomofauna of Turkey is an international Project with the reports¹ of the temporary results free to all the readers. For that reason, the earlier 7 reports were published openly in some previous issues of the Cesa News. ²

¹ The reports of the Entomofauna of Turkey are published at irregular intervals.

The Project Entomofauna of Turkey, without time limitation, is the unique attempt in determining the pterygot fauna of Turkey, based upon the literary data, the collection of the Cesa, as well as the field studies of the authors. Within a year, 7 reports were published (see note), 430 publications examined, more than 39500 taxa (family-, genus-, and species-groups) were included to the Info-system of the Cesa (with the exception of the Lepidoptera)³ Scientific results of some of these activities were published in various issues in Cesa News⁴, and Miscellaneous Papers of the Cesa.⁵ For further information on the Cesa activities see Cesa News Nr. 51.⁶

The present publication contents the list of the 1537 hymenopteran species recorded in Turkey. Of course, this is a temporary result and it cannot reflect the whole Hymenopteran fauna of Turkey. However, this publication itself should not be overlooked, as it is the first and most comprehensive faunal work on Hymenoptera of Turkey published so far. Within the near future, this list and their distributional information will certainly be revised and expanded. The expected actual number of species is more than 3000. But yet, the whole Hymenopteran fauna of Turkey is estimated as more than 15000 species.

Concerning the present information of the database of the Cesa on the Entomofauna of Turkey, totally 12028 taxa (except Lepidoptera), including (711 family-, 2413 genus-, and 8239 species-group taxa) are evaluated. Among them, 1537 hymenopteran species of Turkey belong to 449 genera of the 112 family group taxa are mentioned here.

Meanwhile, the dipteran species of Turkey, recorded in Info-system of the Cesa increased to 1787. For further information about the Diptera of Turkey please visit the related Web Site: <http://www.cesa-tr.org/Entomofauna.htm> and <http://www.cesa-tr.org/numbertr.htm>

In the temporary lists submitted below, all the scientific names of the species and the genera are arranged alphabetically with their families. Chronologically arranged synonymous names are added to each taxa, if available. Distributional information are given as codes of the provinces of Turkey. References are partly published in the previous issue of this journal. Several illustrations are based upon field or laboratory studies of the authors.

We sincerely thank to the following colleagues for their kind helps in determinations of some hymenopteran species: Christian Schmid-Egger, Eckart Stolle, Libor Dvorak, Paolo Rosa, Antoni, Henrik Gyurkovics, and José L.R. de la Cuesta.

³ Subjects on the Lepidoptera are currently studied by the Cesa within several projects see: <http://www.cesa-tr.org/Cesaprojects.htm> According to Infosystem of the Cesa, more than 99000 taxa were included so far.

Revised list of the species of the Lepidoptera carrying vernacular names in Turkish language

Ahmet Ömer Koçak Muhabbet Kemal

Abstract: Revised list of the species of the Lepidoptera carrying vernacular names in Turkish language. *Cesa News* 52: 64-109.

The present revised list comprises 1620 lepidopteran species carrying vernacular names in Turkish.

Key words: List, vernacular name, Turkish, *Lepidoptera*

The first serious attempt on the vernacular names of Turkish butterflies was made by the authors in 2001 (Koçak & Kemal, 2001).⁷ As vernacular names widely used among the Turkish amateurs, the names revised and expanded by the authors after six years (Koçak & Kemal, 2007).⁸ The present list comprises 1620 specific names and it covers not only some native butterflies and moths, but also some species living abroad. The scientific names of the species are arranged alphabetically together with their families and vernacular names. The present list is based upon the Info-system of the Cesa.⁹
